Inspecting your Safety Lines

Whilst lifejackets are routinely inspected and maintained, safety lines are often overlooked. An important part of your harness system, safety lines should be inspected to ensure they are also in good condition.

- Webbing should be inspected for any signs of wear and damage to the fibres
- Check the webbing for any staining which could indicate contact with a contaminant
- Check the 'overload indicator' has not been triggered
- Clips should be checked to ensure the moving parts are operating as designed, opening and closing easily
